DETAILED ACTION

Acknowledgement of the receipt and entry the claims filed on 09/24/2003.

Claims 33 and 34 will be examined on the merit.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 33 and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Grenfell et al. (US 6416323) in view of Wattsmith (Derwent-ACC-NO 1985-277771, abstract).

Applicants claim a dental cartridge said cartridge fits into a standard local anesthetic syringe wherein the cartridge contains a composition comprising phentolamine mesylate.

Grenfell et al. teach (see, e.g. abstract and column 9 lines 18-33) a dental cartridge said cartridge fits into a standard dental local syringe wherein the cartridge contains a composition comprising substances to improve local anesthesia for dentistry or oral surgery. Grenfell does not teach the claimed substance of the active ingredient of phentolamine mesylate within the cartridge that fits into a standard dental local syringe.

Wattsmith beneficially teaches (see, e.g. abstract) that phentolamine or its salts is useful to improve local anesthesia for dentistry or oral surgery (please note that phentolamine and its salts improved local anesthesia for dentistry or oral surgery as being used as an alpha-adrenoreceptor blocking agent to reduce prolongation of anaesthesia by vasoconstrictor).

One of ordinary skill in the art of creating the claimed invention would have been motivated to substitute Grenfell's claimed active ingredient substance within its claimed dental cartridge with the active ingredient of a phentolamine or its salts as taught by Wattsmith because the above combined two references as a whole would create the claimed invention's dental cartridge said cartridge fits into a standard dental local syringe wherein the cartridge contains a composition comprising phentolamine mesylate to improve local anesthesia for dentistry or oral surgery. Furthermore, the adjustment of other convention working conditions (e.g. although it is well known to one of ordinary skill in the art that in order for the cartridge to be able to fit into standard dental syringe, the cartridge would have to have a volume of between 1.6 ml and 1.8 ml), is deemed a matter of judicial selection and routine optimization which is well within the purview of the skilled artisan.

Accordingly, the invention as a whole is prima facie obvious to one of ordinary skill in the art at the time the invention was made, especially in the absence of evidence to the contrary.
